ABSTRACT:

PROBLEM TO BE SOLVED: To make a conventional individual authentication technology or a security technology unnecessary and to enable price settlement to be performed by the dial Q2 system by constituting the device so that a computer is allowed utility of electronic information after line connection to a telephone number corresponding to the price of the electronic information is completed.

SOLUTION: An electronic merchandise storage part stores electronic information as merchandise to be sold, so-called contents such as software, picture or data, in a form of the electronic information. A charging program storage part stores a charge program. A dial Q2 information storage part stores information charge charge/collection acting services, that is, the telephone number of the dial Q2 system as data. Then, since a personal computer 80 on a merchandise purchaser side is connected through a charge management device 60 of NTT and a public exchange line network PST, it is possible to use the information charge charge/collection acting services or of so-called the dial Q2 system services for settlement of a price.
